HACKTOBERFEST HACK DAY

HYDERABAD

MLH × NIAT - KKH

OFFICIAL MLH CHALLENGE • 2-HOUR HACK DAY BUILD

BEST USE OF GEMMA 4

Build a focused AI experience that uses Gemma 4 to turn multimodal input into something genuinely useful.

BUILD SMALL. MAKE IT WORK. MAKE IT INTERESTING.

120 MINUTES • ONE CLEAR USER STORY • WORKING DEMO

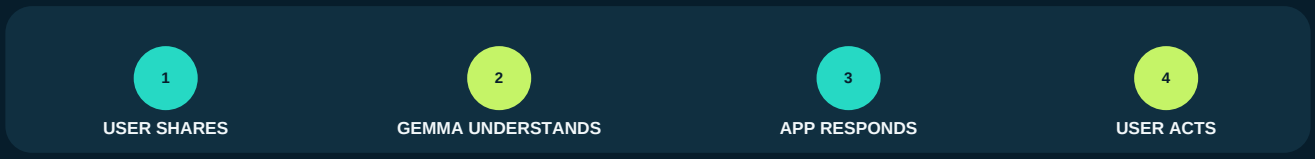
THE PROBLEM

Your users have information trapped in images, screenshots, documents, diagrams, or visual situations. Build an experience where Gemma 4 helps them understand, transform, or act on that information.

01 WHAT YOU ARE BUILDING

- Screenshot → explain the error, identify the likely cause, and suggest the next step.
- Document or form → explain what matters, extract key fields, or turn it into an actionable checklist.
- Diagram or chart → summarize the important information in plain language.
- Image → create a useful response for learning, productivity, accessibility, creativity, or community use.
- Something completely different — the examples are inspiration, not restrictions.

THE CORE LOOP



BUILD REQUIREMENTS

The goal is not to build a generic chatbot. Make Gemma 4 meaningfully responsible for the experience your user sees.

02 CHALLENGE RULES

- Gemma 4 must be meaningfully used in the project and accessed through the Gemini API.
- Use multimodal capability where it adds value; text + image is a natural fit, but other supported directions are welcome.
- Build a focused experience rather than a broad, general-purpose assistant.
- A working end-to-end prototype matters more than a large feature set.
- Your demo should make the Gemma-powered moment obvious within the first 30 seconds.

IDEA IGNITERS

SEE IT

Let users show the app something and ask it to understand what they are seeing.

ACT ON IT

Turn visual information into a decision, checklist, explanation, or next action.

TEACH IT

Use visual input to make a concept easier to learn or explain.

SUCCESS LOOKS LIKE

- A judge can provide an input and immediately see a meaningful Gemma-powered result.
- The app has one clear user story from input to output.
- You can explain why Gemma 4 is important to the solution.
- The prototype is stable enough to demo twice in a row.

THE 120-MINUTE PLAN

Treat the event like a focused product sprint. Cut scope before you cut the demo.

03 BUILD PLAN

TIME	MILESTONE	OUTPUT
00–15	Define	One user, one problem, one wow moment.
15–35	Wire it	UI + Gemini API call + sample input.
35–80	Build core	The complete input → Gemma → result loop.
80–105	Make it useful	Prompt refinement, validation, error state, polish.
105–120	Demo ready	Seeded example + backup input + 30-second story.

JUDGE / DEMO CHECK

- Show the input first. Then show the Gemma 4 result.
- Explain the user problem in one sentence.
- Show one moment where multimodal understanding creates value.
- Keep the demo under 2 minutes and leave time for questions.
- Have a fallback screenshot or sample input if the API call fails.

YOUR IDEA CAN BE ANYTHING. IT JUST NEEDS TO BELONG TO THIS CHALLENGE.
